# Surgical Pathology Report

Name: DOB: Gender: MRN:

Location:

Physician:

Case #: Collected: Received: Reported: Copy To:

## Pathologic Interpretation:

Sentinel node # 1 count

- Metastatic carcinoma to one lymph node, (0/1).

- Metastatic deposit: 0.6 cm.

Cercinoma, ingiltrating ducted, NOS 8500/3 Site: breest, NOS C50.9 hur 3/12/11

NOTE: Metastatic deposit is only present on permanent slides.

B. Sentinel node # 2 count

- No carcinoma seen in one lymph node (0/1)

- Immunohistochemistry for keratin to follow.

C. Right breast 1 short superior, 1 long lateral:

- Invasive and in situ moderately differentiated ductal carcinoma, Nottingham grade 2 (3+2+1), 2.5 cm in greatest dimension.

- Resection margins are free of tumor (closest margin at 1.0 cm: inferior).

- Lymphovascular invasion is not present.

- DCIS, intermediate nuclear grade without necrosis, cribriform type, present in 2 of 15 slides examined.

- See Tumor Summary.

#### Tumor Summary:

#### Specimen:

- Total breast

## Procedure:

- Total mastectomy

#### Lymph Node Sampling:

- Sentinel lymph node

## Specimen Integrity:

- Single intact specimen Specimen Laterality:

- Right

Tumor Size:

- Greatest dimension of largest focus of invasion: 2.5 cm.

**Tumor Focality:** 

Single focus of invasive carcinoma.

### Macroscopic and Microscopic Extent of Tumor:

- Skin: Invasive carcinoma does not invade into the dermis or epidermis
- Skeletal Muscle: No skeletal muscle present

Ductal Carcinoma in Situ (DCIS):

- DCIS is present:
  - Extensive intraductal component (EIC) negative.
  - Size (Extent) of DCIS:
  - Number of blocks with DCIS: 2
  - Number of blocks examined: 15

**Architectural Pattern:** 

- Cribriform

## **Nuclear Grade:**

- Grade II (Intermediate).

Necrosis:

- Not identified.

#### Lobular Carcinoma in Situ:

- Not identified.

### Histologic Type of invasive Carcinoma:

- Invasive ductal carcinoma

Histologic Grade:

UUID:82771A56-81CA-4414-949F-EFBCAE1C98D4 TCGA-EW-A1P5-01A-PR Re Redacted 

## SURGICAL PATHOL Report

- Glandular (Acinar)/Tubular Differentiation: Score 3: <10 of tumor area forming glandular/tubular structures
- Nuclear Pleomorphism: Score 2: Cells larger than no9rmal with open vesicular nuclei, visible nucleoli, and moderate variability in both size and shape.
- Mitotic Count: Score 1 - Overall Grade: - Grade 2

Margins:

- Margins uninvolved by invasive carcinoma: Distance from closest margin: 10 mm (Inferior).
- Lymph-Vascular Invasion:
- Not identified

Dermai Lymph-Vascular Invasion:

- Not identified.

Lymph Nodes:

Number of sentinel lymph nodes examined: 2

Total number of lymph nodes examined (sentinel and nonsentinel): 2

Number of lymph nodes with macrometastases (>0.2 cm): 1

Number of lymph nodes with micrometastases (>0.2 mm to 0.2 cm and /or > 200 cells): 0

Number of lymph nodes with isolated tumor cells (≤.2 mm and ≤200 cells): 0

Size of largest Metastatic deposit: 0.6 cm

Extranodal Extension:

- Not identified.

Method of Evaluation of Sentinel Lymph Nodes:

- Hematoxylin and eosin (H&E), one level
- Immunohistochemistry.

Ancillary Studies:

- Estrogen Receptor: Pending
- Progesterone Receptor: Pending
- Her2/neu FISH:
  - Performed on another specimer
  - Results: Not amplified (HER2 gene copy <4.0 or ratio < 1.8)</li>

Pathologic Staging:

Primary Tumor (Invasive Carcinoma) (pT): pT2 Regional Lymph Nodes (pN) Modifier: (sn) pN1a

Distant Metastasis (M): Not applicable

Pathologic Staging: pT2, pN1a, MX

\*\*\*Electronically Signed Out By

NOTE: Some immunohistochemical antibodies are analyte specific reagents (ASRs) validated by our laboratory (Her 2, Parvo, H. pylori, HBcore). These ASRs are clinically unot require FDA approval. These clones are used: ID5=ER, PgR 636=PR, A485=HER2, H-11=EGFR, CCH2/DDG9=CMV, F39.4.1=AR and HPV by ISH. All immunohistoche with formalin or molecular fixed, paraffin embedded tissue. Detection is by LSAB. The results are read by a pathologist as positive or negative. y ally useful indicators ..... whereical stains are used dui indicators that do

As the attending pathologist, I attest that I: (I) Exemined the relevent preparation(s) for the specimen(s); and (II) Rendered the diagnosis(es).

Procedures/Addenda Addendum

)

Date Ordered: Date Complete: Status: Signed Out

Date Reported:

Addendum Diagnosis

"B" Immunohistochemistry for keratin is negative for carcinoma.

## SURGICAL PATHOL Report

## "C" The tumor cells are positive for ER and PR and negative for HER-2 by Immunohistochemistry

MD

## Intraoperative Consultation

AFS. Sentinel node # 1 count | ) fs: Negative for carcinoma

BFS. Sentinel node # 2 count : fs: Lymph node; negative for tumor.

CFS. Right breast 1 short superior, 1 long lateral fs
Inferior margin; negative for tumor (grossly and microscopically 1.0 cm from margin).

Superficial margin—negative for tumor (gross and microscopic microscopically 3 cm from tumor).

., MD

## Clinical History:

Patient is a | female with right breast cancer.

## **Pre Operative Diagnosis:**

Right breast cancer, tissue study patient

#### Specimen(s) Received:

A: Sentinel node # 1 count fs B: Sentinel node # 2 count / fs

C: Right breast 1 short superior, 1 long lateral fs

#### **Gross Description:**

- A. Received in formalin and labeled "sentinel node # 1 count fs" consists of irregular shaped, adipose tissue fragment, 1.5 x 1.1 x 0.6 cm. Specimen submitted as follows
  - 1 Section for frozen
  - 2&4 The reminders of the specimen in toto
- B. Received in formalin and labeled "sentinel node # 2 count 2.6 x 1.8 x 0.5 cm. Specimen submitted as follows fs" consists of irregular shaped, adipose tissue fragment,
  - 1 Sections for frozen
  - 2&3 Reminders of specimen in toto
- C. Received in formalin and labeled "right breast 1 short superior, 1 long lateral fs" consists of a mastectomy specimen weighing 6.63 grams and measures 20.0 x 16.0 x 4.0 cm. Specimen is oriented with a short stitch superior and a long stitch lateral. There is an ellipse of skin present, 10.0 x 5.5 cm the nipple and areola are present. The areola complex measure 5.0 cm in greatest dimension. The nipple is inverted, distracted and measures 0.7 cm in greatest dimension. For gross purpose the specimen is inked as follow: Superior resection margin inked blue, inferior resection margin inked green, medial resection margin inked red, lateral resection margin inked orange, anterior margin inked yellow and posterior surgical resection margin inked black. Sectioning of the specimen reveals an ill-defined, pale-tan, timm mass, 2.5 x 1.5 x 1.5 cm. This mass is grossly located 1.0 cm from Inferior resection margin and 3.0 cm from lateral resection margin. It is located 2.0 cm from the anterior resection margin and 1.0 cm from the deep resection margin. Upon sectioning the stroma is composed of yellow, lobulated adipose tissue. The firm, white area is closely associated with the skin. No other lesions are identified. Specimen submitted as follows.
  - 1 Inferior margin for frozen sections
